BIOHAZARD

BIOHAZARDS

Biohazard cleaning involves the cleaning, sanitizing and deodorizing of a site where a violent crime, suicide or traumatic accident has occurred.

Because of the potential emotional and physical risks involved, biohazard cleaning can take its toll on many workers.

While there are no certifications required, the Occupational Safety & Health Administration (OSHA) does require any employee at risk of being exposed to bloodborne pathogens to complete training in bloodborne pathogens personal protective equipment (PPE).

BELFOR SERVICES

BELFOR Environmental has an elite staff of field technicians who are trained and prepared to do biohazard cleaning – 365 days a year. It is our mission to safely and thoroughly clean the site with compassion and confidentiality. The ultimate goal is return the site to a habitable condition.

Our biohazard cleaning process involves the following stages:

- Containment and cleanup
- Sanitization
- Deodorization
- Restoration

We provide biohazard cleaning for, but not limited to:

- Viruses and Infectious Diseases
- Bloodborne Pathogens
- Chemical Spills
- Industrial Accidents
- Sewage Backups

VIRUSES AND DISEASES

BELFOR Environmental provides biohazard cleaning services for a broad range of viruses and infectious diseases including, but not limited to:

- Influenza (Flu)
- Diphtheria
- Norovirus or Coronavirus
- Respiratory Syncytial Virus (RSV)
- Legionnaires' Disease

BLOODBORNE PATHOGENS

If you have experienced a needle stick or sharps injury, or were exposed to the blood or other body fluid of someone else, you are at risk of being exposed to a bloodborne pathogen. Bloodborne pathogens can also be found at crime scenes and suicide sites.

BELFOR Environmental provides biohazard cleaning services for most bloodborne pathogens, including the most common and concerning: HIV/AIDS, Hepatitis B virus, and Hepatitis C virus.

CHEMICAL SPILLS AND INDUSTRIAL ACCIDENTS

Biohazard cleaning is commonly needed for chemical spills and industrial accidents. Trauma involving injury or death may occur when handling chemicals, using machinery, operating vehicles, or working with electrical components.

SEWAGE BACKUPS

Through skin contact, hand-to-mouth, or air-borne consumption, sewage backups can contain dangerous bacteria such as E. coli and Hepatitis. BELFOR Environmental teams are well experienced at the specialized cleaning needed for sewage backups.
