

HAZARDOUS WASTE REMOVAL

ENVIRONMENTAL SOLUTIONS

HAZARDOUS WASTE

Hazardous waste management is an important part of any environmental project.

From industrial manufacturing process waste to sludge and spills, BELFOR Environmental offers a full spectrum of waste management remediation services including:

- Hazardous waste identification
- Hazardous waste characterization
- Hazardous waste containment
- Hazardous waste cleaning
- Safe recycling, removal, storage and disposal

Hazardous or “solid waste” is defined as materials that pose a threat to human health and the environment. Hazardous waste may come in many forms, including liquids, solids gases, and sludges.

The Environmental Protection Agency (EPA) has strict regulations in place for hazardous waste management. Our personnel are thoroughly knowledgeable in the complex regulations that apply to any situation involving hazardous waste. Our waste managers are trained in RCRA, TSCA and D.O.T. regulations.

IDENTIFICATION

Nearly everything we do leaves behind some kind of waste. Understanding the definition of a solid waste and the many regulations associated with it is an important first step in determining or identifying if the waste is a regulated hazardous waste. BELFOR Environmental teams are well trained in the identification or hazardous waste and the exclusions.

CHARACTERIZATION

BELFOR Environmental teams are also trained in characterizing hazardous waste for ignitability, corrosivity, reactivity or toxicity.

HAZARDOUS WASTE CLEAN UP

Facilities that treat, store or dispose of hazardous wastes are required to investigate and clean up contaminated soil, groundwater, and surface water. Our environmental teams have assisted clients with almost every type of hazardous waste clean up project.

HAZARDOUS WASTE DISPOSAL

Because hazardous waste transporters move regulated wastes on public roads, highways, rails, and waterways, there are strict government regulations that must be followed.

BELFOR Environmental has preferred agreements with a variety of transportation, treatment and disposal firms to provide cost-effective alternatives for waste disposal needs.

BELFOR Environmental will select the most appropriate facilities for final disposal based on service, compliance, price, and client preference.

Our transparent and unbiased selection process ensures each waste stream is managed properly and represent the best total project value for our clients.
